# Get In Touch With Biomed

# Kit Contents

- 1 x MSP430 Microcontroller
- 1 x MSP430 Development Tool
- 1 x Prototyping Breadboard
- 4 x 100 ohm resistors
- 4 x Coloured LEDs
- 4 x Coloured Switches
- 1 x 0.25 Watt Speaker
- 1 x AAA Battery Holder
- 3 x AAA Batteries
- 12 x Male-Female Jumper Wires
- 12 x Male-Male Jumper Wires

# What is a Microcontroller?

"A microcontroller is a small computer on a single integrated circuit containing a processor core, memory, and programmable input/output peripherals."

<http://en.wikipedia.org/wiki/Microcontroller>

Memory\_Game \$

```
void loop()
{
    // ----- Gameplay ----- //

    // Play the game sequence
    for (int j=0; j<=game_level; j++)
    {
        play(sequence[j], game_speed);
    }

    // Get input sequence from the user
    for (int i=0; i<=game_level; i++)
    {
        while(1)
        {
            if (digitalRead(BUTTON_1) == LOW)
            {
                player_input[i] = 1;
                play(1, input_speed);
                break;
            }
            else if (digitalRead(BUTTON_2) == LOW)
            {
                player_input[i] = 2;
                play(2, input_speed);
                break;
            }
            else if (digitalRead(BUTTON_3) == LOW)
            {
                player_input[i] = 3;
                play(3, input_speed);
                break;
            }
            else if (digitalRead(BUTTON_4) == LOW)
            {
                player_input[i] = 4;
                play(4, input_speed);
                break;
            }
        }
    }
}
```

107 LaunchPad w/ msp430g2231 (1MHz) on COM1

# Discrete Components

## Input Peripherals

### Switches

Your kit contains four coloured mechanical momentary switches.

Switches are used to make and break electrical connections.

These momentary switches are "normally open", and "closed" when depressed.

Switch  
Symbol

## Output Peripherals

### Light Emitting Diodes (LED)

LED  
Symbol

Your kit contains four coloured LEDs.

LEDs emit light when their anode has a voltage more positive than their cathode, and current is able to flow.

LEDs require the correct polarity (i.e. direction matters!)

### Loudspeaker

Speaker  
Symbol

Your kit contains one 0.25 Watt speaker.

Speakers convert electrical signals into audible signals.

Speakers require an alternating input signal to generate sound.

# Applications

Household Appliances

Smart Grid

Vending Machines

Industrial

Automotive

Medical

# Today's Project

## Memory Game

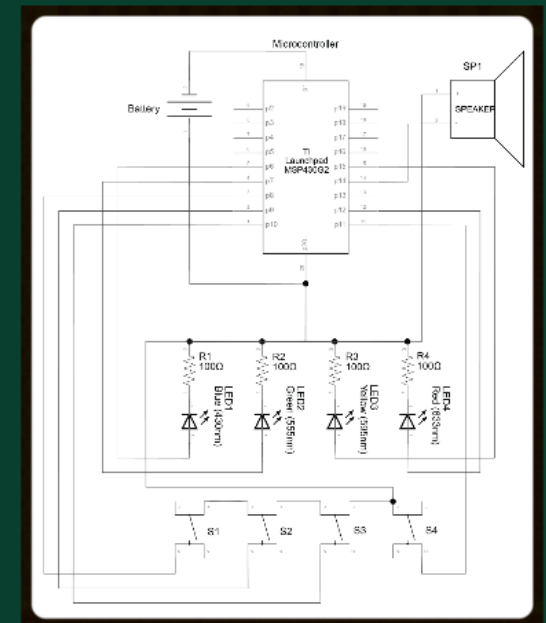

Actual

Breadboard

Schematic

# Construction Notes

## Breadboard Connections

- Each red and blue vertical "rail" is a single connection.
- Each row has two sections of horizontal connections.

## LED Polarity

- The orientation of LEDs matter!
- Cathode (negative) terminal has "flat spot" and shorter pin.
